

Robert Siński

Fullstack developer

Katowice, Poland robert.sinski@outlook.com robertsinski.dev github.com/Biplo12 linkedin.com/in/robert-siński

Four years of building web apps, mostly in TypeScript. Backend and frontend, usually both on the same project.

EXPERIENCE

Hurtopony

- Fullstack Developer Apr 2025 to now
Frontend of the company store and the internal panels, the NestJS service behind them, and the scrapers that keep its data current. A few thousand people use the store every day and the scrapers hold over a million records.

Gravity Rifters contract 1 year 8 months

- Fullstack Developer Jan 2025 to Aug 2026
Built the site for the game and its wiki, internal tools for the team, and set up the server it runs on.
Next.js · Node · TypeScript · Docker

Fundacja Polskie Maki contract 6 months

- Junior Fullstack Developer Oct 2023 to Mar 2024
Two browser games for the foundation. Players join a session without an account, the way Kahoot works, and the quizzes use the map and where the player is.

Anfata Games 2 years 8 months

- Fullstack Developer Feb 2024 to Apr 2025
Features across the company sites and apps, serverless functions on Firestore and Parse, and the frontend side of smart contract calls.
- Junior Fullstack Developer Sep 2022 to Jan 2024
Smaller features on the sites and apps, then Node and Python scripts that took over jobs people had been doing by hand.

PROJECTS

Klaps site · github

Where and when older films are playing in Polish cinemas. Six services I built and run; the collector reaches 563 cinemas in 316 cities every day and keeps over 300 000 screenings current.

BoardFlow site · github

A whiteboard people draw on together, with over 200 accounts and 150 boards so far. What only matters while someone is looking lives in a Liveblocks room; what has to survive a refresh lives in Convex.

ts-api-scaling-lab github

A REST API on Postgres written the plain way, then made faster in eight measured steps: 1 request per second at the start, 2600 at the end, same machine. Indexes, N+1, clustering, load shedding, prepared statements, cache, measured after each.

orderflow-engine github

Order processing built so a failure in one step does not lose the order. Five processes, no direct calls, six events as the only channel. Outbox writes, idempotent consumers, compensation.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL	Data	PostgreSQL, MySQL, Redis, Drizzle, BullMQ
Frontend	React, Next.js, Tailwind	Tooling	Docker, GitHub Actions, Git, Jest
Backend	NestJS, Fastify, Node, Bun		

EDUCATION

Zespół Szkół Technicznych w Bytomiu 2018 to 2022

IT technician
Programming, databases and networking.
